

Project presentation

A group of people are working at laptops in a dimly lit office. The scene is viewed from behind a person in the foreground who is wearing headphones and typing on a laptop. Other people are visible in the background, also working. The overall atmosphere is focused and professional.

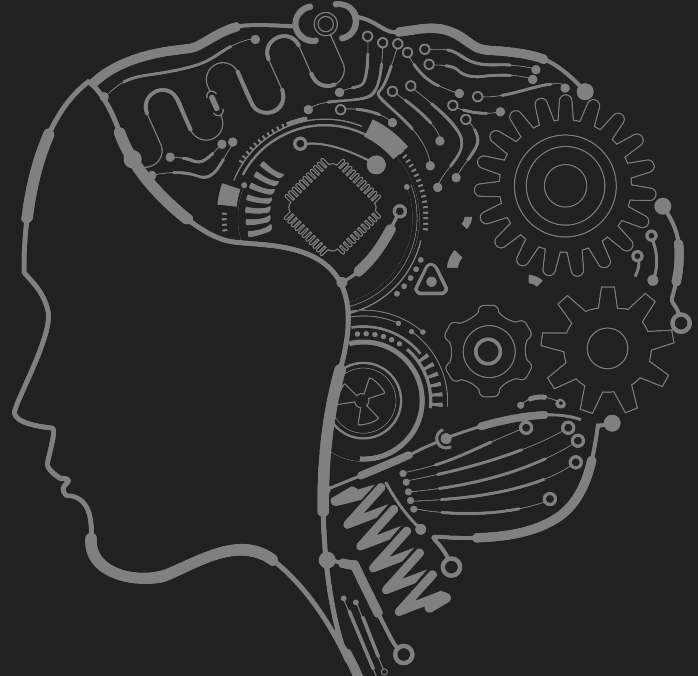

Our Background

Our problem statement

A wide-angle photograph of a large conference hall. The room is filled with people seated at long, dark tables, facing a stage at the far end. The stage features a large presentation screen displaying a slide with logos. The hall has a high, arched ceiling with exposed wooden beams and modern lighting fixtures. The overall atmosphere is professional and focused.

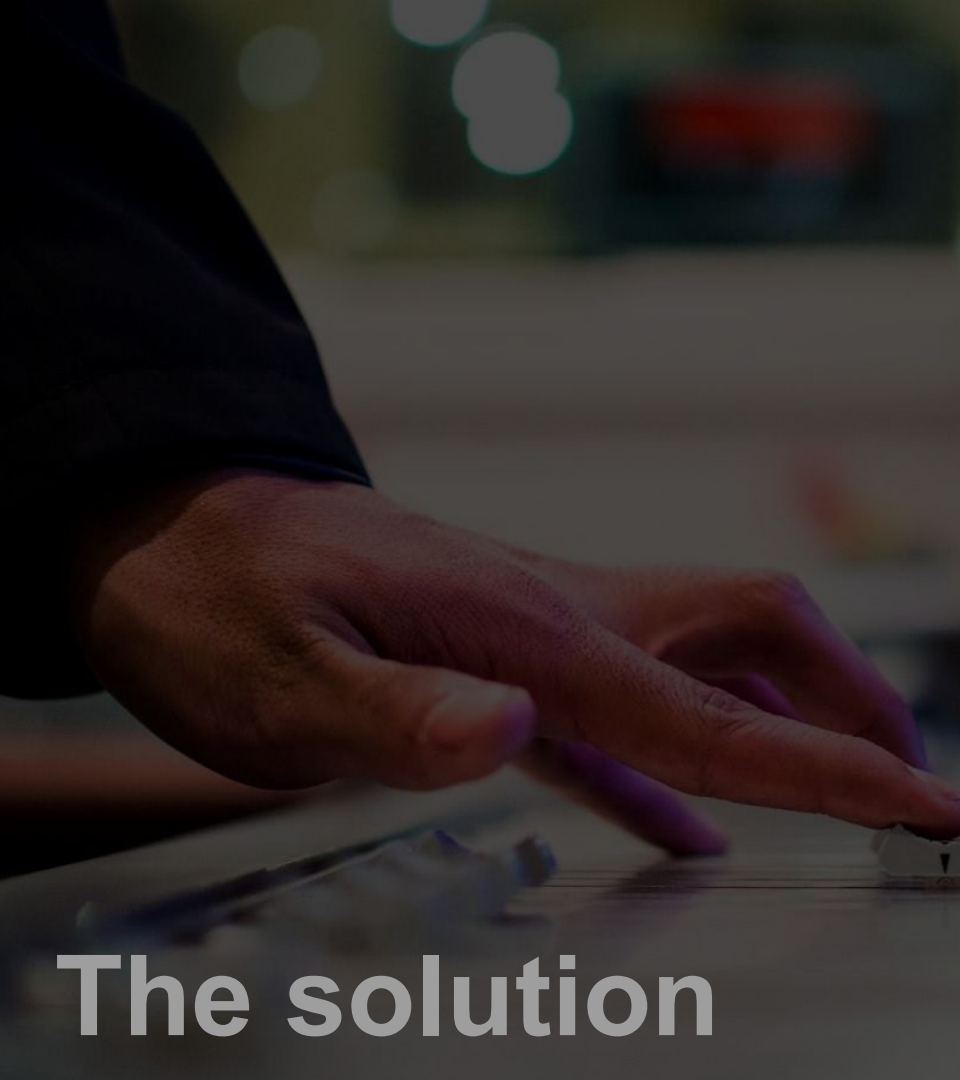

A good presentation is critically important, because it will form the impression of your product for the judges and for the community

- Start from the idea
- Frame the problem for the audience
- Quantify the scope of the problem and connect it to your audience

**How my product can
solve the problem
and how it works**

The solution

- Show how your product can solve the problem you identified.
- Make a detailed explanation of how it works, and the technologies you used for this.
- Make people excited about your project through a case study of how the user interaction with your product will look like.

The solution: AI

Do not forget to mention what prospects there are for the product, and where it can be applied

This is a very important question that you should ask yourself in order to understand whether it is worth continuing to develop your idea and investing you time and money in it.

A group of people are working at laptops in a dimly lit office. The scene is captured from behind a person in the foreground who is wearing headphones and typing on a laptop. Other people are visible in the background, also working. The overall atmosphere is focused and professional.

How we made it

A working demo of it

For this, a screen recording of how you perform a common user's interaction might be perfect
